

# Stone Aluminum Honeycomb Composite Panel

## Stone Aluminum Honeycomb Composite Panel

The face, motherboard, and core material of stone aluminum honeycomb composite panels are all made of high-strength alloy aluminum. It is an environment-protective product. As the air-layers between surface and motherboard are divided into many obturating points, so the transmission of heat and sound wave are seriously limited. Compared with other curtain wall decoration materials, this aluminum honeycomb composite panel has nice heat-preservation and heat-isolation features which make it be suitable for construction decoration materials, vehicles, boat wallboards and partitions and so on.

### **Specifications of Stone Aluminum Honeycomb Composite Panel:**

Standard size: width 600mm-1200mm length 800mm-2000mm

Max size; 1250mmx3000mm

Features of this aluminum honeycomb composite panel:

- 1.Light weight( $16\text{kg}/\text{m}^2$ , about 1/5 of the real stone with the same thickness)
- 2.Better impact resistance (10 times more than 30mm granite or marble)
- 3.High rigidity
- 4.Sound insulation
- 5.Superior adaptability
- 6.Heat preservation
- 7.Easy to install
